

Sarthi Platform: Developer Product Requirements Document (PRD)

This document provides comprehensive technical implementation specifications for the Sarthi healthcare platform, organized by business function. All features reference the architectural components and data sources defined in the **Sarthi Enterprise Architecture Document v1.5**.

Table of Contents

1. [Patient Experience & Engagement](#)
 2. [Clinical Workflows & AI Assistance](#)
 3. [Administrative & Revenue Operations](#)
 4. [AI Agent Platform & Orchestration](#)
 5. [Management & Operations Intelligence](#)
-

1. Patient Experience & Engagement

This category encompasses all patient-facing features and workflows that create the front-door experience for healthcare consumers.

1.1 Patient Portal Dashboard

Core Functionality

- **At-a-Glance Metrics:** Displays key summary cards for appointments, messages, and bills
- **Device Management:** Shows assigned at-home monitoring devices with return due dates
- **Quick Actions:** Provides streamlined access to common tasks (booking, lab results, billing)

Technical Implementation

- **Data Sources:**
 - **PostgreSQL:** Patient appointments and billing summaries via API Gateway
 - **Firestore:** Real-time device assignments and status updates
 - **Redis Cache:** Frequently accessed patient data for performance optimization
- **Authentication:** Multi-tenant patient authentication via Firebase Auth
- **Client-Side Rendering:** Uses `isClient` state to prevent hydration errors with dynamic dates

AI Integration

- **Device Monitoring Agent:** Receives automated reminders from the AI Device Monitoring Agent (defined in Architecture v1.5)
- **Proactive Engagement:** Backend AI agents trigger notifications via Cloud Pub/Sub messaging

1.2 Patient Billing Interface

Core Functionality

- **Bill Separation:** Distinguishes between outstanding bills and payment history
- **Payment Workflow:** Integration with payment processors via API Gateway
- **Transaction History:** Secure access to historical payment records

Technical Implementation

- **Data Sources:**
 - **PostgreSQL:** Patient billing records and payment history
 - **BigQuery:** Historical billing analytics and reporting
 - **Cloud Storage:** Encrypted storage for billing documents and receipts
- **Payment Processing:** Secure payment gateway integration through API microservices

AI Integration

- **Billing Pipeline:** Receives processed claims from the AI-powered billing workflow
- **Cost Optimization:** AI-driven payment plan recommendations based on patient history

1.3 Patient Lab Results

Core Functionality

- **Clinical Safeguards:** Shows only doctor-approved results with appropriate clinical context
- **Result Interpretation:** AI-generated patient-friendly explanations for normal results
- **Safety Protocols:** Prevents patient misinterpretation through clinical validation workflow

Technical Implementation

- **Data Sources:**
 - **PostgreSQL:** Lab results database with workflow status tracking
 - **Cloud Storage:** Secure PHI-compliant storage for lab documents
 - **Firestore:** Real-time status updates from clinical workflow

- **Security:** HIPAA-compliant data access with audit logging to Cloud Logging

AI Integration

- **Clinical Validation Pipeline:** Endpoint of the multi-stage AI-assisted lab processing workflow
- **Patient Communication:** AI-generated explanations reviewed by clinical staff

1.4 AI Check-in Kiosk

Core Functionality

- **Document Processing:** Upload and analyze insurance cards and intake forms using Document AI
- **Data Extraction:** AI-powered OCR integrated with the AI Agent Platform
- **Verification Workflow:** Staff review interface with AI suggestions
- **Queue Integration:** Seamless handoff to clinical workflow queues

Technical Implementation

```
yaml

# Data Flow Architecture
Frontend Upload → Cloud Storage → Document AI Agent →
Human Review Interface → PostgreSQL Patient Queue →
Real-time Notifications via Pub/Sub
```

AI Workflow Integration

- **Document AI Agent:** Leverages the capability-based AI agent routing system
- **Processing Pipeline:**
 - **Input:** Document images stored in Cloud Storage with PHI encryption
 - **AI Processing:** Document AI service for OCR + custom clinical interpretation models
 - **Output:** Structured patient data via API Gateway to PostgreSQL
- **Validation Workflow:** Human-in-the-loop approval tracked in Firestore

State Management

- **Real-time Updates:** Firestore listeners for live workflow status
- **Data Persistence:** PostgreSQL for patient records, Cloud Storage for documents
- **Queue Management:** Pub/Sub messaging for workflow orchestration

1.5 Voice Agent Patient Interactions

Core Functionality

- **Empathetic Communication:** Context-aware conversations powered by the AI Agent Platform
- **Proactive Outreach:** Automated appointment reminders and follow-up calls
- **Appointment Management:** Voice-based scheduling integrated with the scheduling system

Technical Implementation

- **AI Agent Platform:** Utilizes the Voice Agent component of the AI orchestration system
- **Context Storage:**
 - **Pinecone Vector Database:** Conversation history and personal context embeddings
 - **PostgreSQL:** Patient preferences and communication history
- **Real-time Processing:**
 - **Speech Services:** Google Cloud Speech-to-Text and Text-to-Speech
 - **Telephony:** Cloud-based telephony integration via API Gateway

AI Integration

- **Multi-Agent Coordination:** Triggered by Waitlist Manager and other orchestration agents
 - **Contextual Memory:** Vector embeddings for personalized conversation continuity
 - **Workflow Integration:** Direct integration with appointment scheduling and clinical systems
-

Nice to Have Features: Patient Experience & Engagement

1.6 Telehealth & Multi-State Expansion

Core Functionality

- **Cross-State Telehealth:** Automated compliance with state-specific telehealth regulations
- **Global Specialist Consultations:** Real-time video consultations with automatic timezone coordination
- **Multi-Location Patient Access:** Unified patient experience across practice locations

Technical Implementation

- **Multi-Region Architecture:** Leverages the global deployment capability from Enterprise Architecture v1.5
- **Regulatory Compliance Engine:** Automated state medical license verification and telehealth law compliance

- **Data Residency Management:** Automatic patient data localization based on jurisdiction requirements

AI Integration

- **Regulatory AI Agent:** Monitors changing telehealth regulations and updates compliance automatically
- **Timezone Intelligence:** Smart scheduling that optimizes for provider and patient availability across regions

1.7 Personalized Health Coaching Platform

Core Functionality

- **AI-Powered Health Coaching:** Personalized health recommendations based on patient conditions and goals
- **Medication Adherence Support:** Smart reminders with behavioral nudge techniques
- **Health Education Content:** Tailored educational materials based on patient literacy and conditions

Technical Implementation

- **Patient Behavior Analytics:** BigQuery analysis of patient engagement patterns and health outcomes
- **Content Personalization Engine:** AI-driven content recommendation system using vector embeddings
- **Multi-Channel Delivery:** SMS, email, and portal integration for preference-based communication

AI Integration

- **Health Coaching Agent:** Personalized conversation flows based on patient health goals and progress
- **Adherence Prediction:** AI models to identify patients at risk of medication non-compliance
- **Educational Content AI:** Dynamic content generation tailored to patient-specific needs

1.8 Chronic Care Management Portal

Core Functionality

- **Remote Patient Monitoring:** Integration with wearable devices and home monitoring equipment
- **Care Plan Automation:** AI-generated care plans with automated progress tracking
- **Family Caregiver Integration:** Secure access for family members to support patient care

Technical Implementation

- **IoT Device Integration:** Real-time data ingestion from monitoring devices via API Gateway
- **Care Plan Database:** PostgreSQL storage of structured care plans with progress tracking
- **Multi-User Access Control:** Role-based permissions for patients, caregivers, and clinical staff

AI Integration

- **Chronic Care AI Agent:** Monitors patient vitals and triggers interventions based on care protocols
- **Predictive Health Analytics:** Early identification of health deterioration or improvement trends

2. Clinical Workflows & AI Assistance

This category covers all clinical staff workflows enhanced by AI assistance while maintaining human oversight and clinical judgment.

2.1 MA (Medical Assistant) Workflows

2.1.1 MA Dashboard & Patient Queuing

Core Functionality

- **Dynamic Patient Queues:** Real-time patient status tracking across clinical workflow stages
- **Live Wait Tracking:** Continuous calculation of patient wait times with SLA monitoring
- **Room Assignment:** Interactive room management with availability optimization
- **Status Orchestration:** Automated status updates integrated with workflow engine

Technical Implementation

```
yaml

# Real-time Data Architecture
Firestore Real-time Listeners → Patient Queue State Management →
Status Updates via API Gateway → PostgreSQL Persistence →
Cross-component Synchronization via Pub/Sub
```

Data Sources

- **Firestore:** Real-time patient queue with live status updates
- **PostgreSQL:** Patient scheduling and room assignment records
- **Redis Cache:** Frequently accessed queue data for performance

- **Cloud Monitoring:** Wait time analytics and SLA tracking

2.1.2 MA Patient Intake

Core Functionality

- **Vitals Collection:** Integration with medical device APIs and manual entry validation
- **Medication Reconciliation:** AI-powered medication matching and conflict detection
- **Ambient AI Scribe:** Live conversation transcription and clinical summary generation
- **Doctor Handoff:** Structured summary creation for clinical encounter preparation

Technical Implementation

- **Data Sources:**
 - **PostgreSQL:** Patient medical history and medication records
 - **Firestore:** Real-time intake progress and clinical notes
 - **Speech Recognition:** Browser API integration with cloud backup processing
- **AI Integration:**
 - **Clinical Summary Agent:** Processes conversation transcripts via the AI Agent Platform
 - **Medication Reconciliation:** AI-powered drug interaction and allergy checking
 - **Workflow Orchestration:** Automated handoff to doctor queue via Pub/Sub messaging

AI Workflow: Ambient Scribe Summary

- **Input:** Live conversation transcript from browser Speech Recognition API
- **Processing:** Clinical Summary Agent analyzes conversation for medical relevance
- **Output:** Structured handoff summary stored in PostgreSQL and Firestore
- **Human Approval:** Required before patient advancement to doctor queue

2.2 Doctor Clinical Workflows

2.2.1 Doctor Dashboard

Core Functionality

- **Intelligent Patient Queuing:** AI-prioritized patient lists based on acuity and wait times
- **Lab Result Reviews:** Integrated lab analysis with AI-generated clinical interpretations
- **Clinical Decision Support:** Evidence-based recommendations and alert systems
- **Workflow Optimization:** Smart scheduling and task prioritization

Technical Implementation

- **Data Sources:**
 - **PostgreSQL:** Patient schedules, lab results, and clinical data
 - **BigQuery:** Historical clinical patterns for AI insights
 - **Firestore:** Real-time patient status and queue updates
- **AI Integration:**
 - **Lab Analysis Agent:** Automated lab result interpretation and flagging
 - **Clinical Decision Support:** Evidence-based recommendation engine
 - **Priority Scoring:** AI-driven patient acuity assessment

2.2.2 Doctor Clinical Encounter (Patient Chart)

Core Functionality

- **Pre-Encounter Intelligence:** AI-generated patient summaries and risk assessments
- **Live Clinical Documentation:** AI Scribe for real-time SOAP note generation
- **Automated Coding:** AI-powered ICD-10 and CPT code suggestions
- **Order Management:** Intelligent order sets with prior authorization checking
- **Billing Integration:** Seamless claim generation and review workflow

Technical Implementation

```
yaml

# Clinical AI Workflow
Pre-encounter Analysis → Live Transcription → Clinical Note Generation →
Code Suggestion → Prior Auth Checking → Claim Generation →
Billing Queue Integration
```

AI Workflows Integration

1. **Clinical Note Generation Agent:**
 - **Input:** Patient conversation transcript and clinical context
 - **Tools:** Prior authorization checker, appointment scheduler
 - **Output:** Structured SOAP note with billing codes and orders
2. **Billing Claims Agent:**
 - **Input:** Clinical note and billing codes

- **Processing:** Payer rule validation and denial risk assessment
- **Output:** Claims ready for submission or flagged for review

2.2.3 Doctor Mobile Companion & Daily Briefing

Core Functionality

- **AI-Generated Daily Podcast:** Automated audio briefing of the day's schedule, patient priorities, and critical information
- **Mobile Dashboard:** Lightweight mobile interface for real-time schedule and patient queue access
- **Hands-Free Staff Communication:** Voice-activated messaging and task delegation to clinical staff
- **Pre-Arrival Workflow Management:** Schedule adjustments and clinical decisions before entering the practice

Technical Implementation

- **Cross-Platform Mobile App:** Progressive Web App (PWA) or native mobile application with offline capabilities
- **Audio Generation Pipeline:**
 - **Text-to-Speech Service:** Google Cloud Text-to-Speech with healthcare-optimized voice models
 - **Content Generation:** AI Agent creates structured daily briefing from patient data and priorities
 - **Audio Processing:** Real-time audio streaming and offline download capabilities
- **Voice Command Processing:**
 - **Speech-to-Text:** Real-time voice recognition for staff communication
 - **Natural Language Processing:** Intent recognition for common physician requests
 - **Action Routing:** Automated task assignment to appropriate staff members

Data Sources & Integration

- **Real-Time Schedule Data:** Firestore listeners for live schedule updates and patient status changes
- **Patient Context:** PostgreSQL patient records with AI-generated encounter summaries
- **Staff Communication:** Pub/Sub messaging for real-time task assignment and notifications
- **Mobile Synchronization:** Offline-first architecture with background data sync

AI Workflow: Daily Briefing Generation

- **Input:** Doctor's complete daily schedule, patient records, priority flags, and clinical alerts
- **Processing:**

- **Content Synthesis Agent:** Analyzes patient data to create personalized briefing content
- **Priority Ranking:** AI-driven prioritization of patients based on acuity and complexity
- **Time Optimization:** Schedule analysis with suggestions for efficiency improvements
- **Output:** Structured audio briefing with patient summaries, priorities, and recommended actions

Voice Command Integration

yaml

Voice Command Workflow

Doctor Voice Input → Speech-to-Text → Intent Recognition →
Action Classification → Staff Assignment → Real-Time Notification →
Confirmation Back to Doctor

Supported Voice Commands:

- **Schedule Management:** "Move the 2 PM appointment to 3 PM", "Add 15 minutes to the diabetes consultation"
- **Staff Communication:** "Ask the MA to prep extra bandages for room 3", "Have the front office call Mrs. Johnson about her lab results"
- **Clinical Preparation:** "Pull up the chest X-ray for the 10 AM patient", "Flag the hypertension patient for medication review"
- **Resource Requests:** "Make sure room 2 has the EKG machine ready", "Order additional flu vaccines for this afternoon"

Mobile App Features

- **Offline-First Design:** Critical patient information cached for areas with poor connectivity
- **Smart Notifications:** Intelligent alerts for schedule changes, urgent patient needs, or staff messages
- **Quick Actions:** One-tap responses to common scenarios (approve lab results, confirm appointments)
- **Integration with Car Systems:** Android Auto/Apple CarPlay compatibility for hands-free use during commute

Staff Integration & Workflow Impact

- **MA Dashboard Integration:** Voice requests from doctor appear as priority tasks with context
- **Front Office Coordination:** Automatic scheduling changes reflected across all staff dashboards
- **Clinical Preparation:** Equipment and supply requests automatically routed to appropriate staff
- **Real-Time Feedback:** Staff can send confirmations and updates back to the mobile app

AI Integration: Intelligent Briefing Agent

- **Contextual Analysis:** AI analyzes patient history, recent visits, and clinical alerts to generate relevant briefing content
- **Personalization:** Learns doctor's preferences for briefing style, detail level, and priority focus areas
- **Proactive Insights:** Identifies potential scheduling conflicts, patient preparation needs, or clinical decision points
- **Continuous Learning:** Adapts briefing content based on doctor feedback and workflow patterns

Technical Architecture

```
yaml
# Mobile App Architecture
Mobile PWA/Native App → API Gateway → AI Briefing Service →
Staff Communication Hub → Real-Time Database Sync →
Audio Streaming Service → Offline Cache Management
```

Security & Compliance

- **Mobile Device Security:** End-to-end encryption for all patient data on mobile devices
- **Biometric Authentication:** Fingerprint/Face ID for secure app access
- **Session Management:** Automatic timeout and secure token refresh
- **HIPAA Compliance:** Full audit logging of mobile PHI access and voice commands

Development Considerations

- **Platform Choice:** PWA for cross-platform compatibility vs. native for optimal performance
- **Voice Processing:** Client-side processing for low latency vs. cloud processing for accuracy
- **Battery Optimization:** Efficient background sync and audio processing
- **Network Resilience:** Graceful degradation in areas with poor cellular coverage

This mobile companion transforms the doctor's daily workflow by enabling productive preparation and seamless staff communication before they even arrive at the practice, maximizing their efficiency and patient care quality.

2.3 Technician & Lab Workflows

2.3.1 Technician Dashboard

Core Functionality

- **Lab Result Processing Queue:** AI-prioritized lab results requiring technician review
- **Quality Assurance:** AI-assisted result validation and error detection
- **Workflow Integration:** Seamless handoff to physician review queue

Technical Implementation

- **Data Sources:**
 - **PostgreSQL:** Lab result database with workflow status tracking
 - **Cloud Storage:** Lab documents and images with PHI encryption
 - **Firestore:** Real-time workflow status and queue management

2.3.2 AI-Assisted Lab Result Entry

Core Functionality

- **Automated OCR Processing:** Document AI integration for lab report digitization
- **Clinical Validation:** AI-powered normal/abnormal value detection
- **Quality Control:** Human-in-the-loop verification workflow
- **Result Distribution:** Automated routing to appropriate clinical staff

AI Workflow: Lab Processing Agent

- **Input:** Lab document images from Cloud Storage
- **Processing:** Document AI OCR + clinical interpretation models
- **Output:** Structured lab data with normal/abnormal flagging
- **Validation:** Required human technician approval before physician review

Technical Implementation

- **Document Processing:** Google Document AI for OCR with healthcare-specific models
- **Clinical Rules Engine:** AI-powered normal range validation and flagging
- **Workflow Orchestration:** Pub/Sub messaging for result distribution
- **Audit Trail:** Complete processing history logged to Cloud Logging

Nice to Have Features: Clinical Workflows & AI Assistance

2.4 Real-Time Clinical Decision Support Engine

Core Functionality

- **Live Clinical Alerts:** Real-time notifications during patient encounters based on clinical guidelines
- **Drug Interaction Checking:** Advanced medication safety with patient-specific risk factors
- **Evidence-Based Recommendations:** Treatment suggestions based on latest medical literature
- **Clinical Guideline Adherence:** Automated monitoring and suggestions for quality measures

Technical Implementation

- **Clinical Rules Engine:** Real-time processing of clinical data against evidence-based guidelines
- **Medical Knowledge Graph:** Vector database integration with medical literature and guidelines
- **Alert Management System:** Intelligent alert prioritization to reduce alert fatigue

AI Integration

- **Clinical Decision Support Agent:** Real-time analysis of patient data against clinical guidelines
- **Medical Literature AI:** Continuous integration of latest research and recommendations
- **Risk Stratification Engine:** Patient-specific risk assessment for various conditions

2.5 Advanced Care Team Collaboration

Core Functionality

- **Huddle Board Integration:** Daily team coordination with AI-generated priorities and updates
- **Task Assignment Optimization:** Intelligent work distribution based on staff skills and availability
- **Cross-Training Recommendations:** AI-driven suggestions for workflow resilience and staff development
- **Real-Time Care Coordination:** Live collaboration tools during complex patient encounters

Technical Implementation

- **Collaboration Platform:** Real-time messaging and task management via Firestore
- **Skills Database:** PostgreSQL tracking of staff capabilities and certifications
- **Workload Analytics:** BigQuery analysis of task distribution and completion patterns

AI Integration

- **Workflow Optimization Agent:** Dynamic task assignment based on real-time staff availability and expertise
- **Training Recommendation Engine:** AI analysis of workflow gaps and training opportunities
- **Care Coordination AI:** Intelligent escalation and team notification systems

2.6 Clinical Knowledge Search & Similar Case Recommendations

Core Functionality

- **Intelligent Clinical Search:** Natural language search across patient cases and medical literature
- **Similar Patient Case Recommendations:** AI-powered suggestions based on current patient presentation
- **Clinical Protocol Suggestions:** Personalized care protocols based on patient history and evidence

Technical Implementation

- **Vector Search Engine:** Pinecone-powered semantic search across clinical data and literature
- **Case Similarity Engine:** AI analysis of patient presentations to identify similar cases
- **Protocol Database:** Structured storage of care protocols with outcome tracking

AI Integration

- **Clinical Knowledge Agent:** Advanced search and recommendation engine for clinical decision support
 - **Case-Based Reasoning AI:** Pattern recognition across patient cases for diagnostic and treatment insights
-

3. Administrative & Revenue Operations

This category encompasses billing, scheduling, referral management, and other administrative workflows that drive practice operations.

3.1 Billing Portal & Revenue Cycle

Core Functionality

- **Intelligent Claim Review:** AI-powered claim scrubbing with denial risk assessment
- **Human-in-the-Loop Approval:** Biller review workflow for flagged claims
- **Automated Submission:** Direct integration with payer systems for approved claims
- **Revenue Analytics:** Real-time billing performance and denial tracking

Technical Implementation

- **Data Sources:**
 - **PostgreSQL:** Claims database with processing status tracking
 - **BigQuery:** Revenue analytics and denial pattern analysis

- **Cloud Storage:** Claim documents and supporting documentation
- **Integration APIs:** Direct payer connectivity for claim submission and status tracking

AI Integration: Claims Processing Pipeline

1. Claims Scrubbing Agent:

- **Input:** Clinical notes and billing codes from doctor encounters
- **Processing:** Payer rule validation and medical necessity analysis
- **Output:** Approved claims or flagged issues with specific recommendations

2. Revenue Optimization:

- **Denial Prediction:** AI models trained on historical denial patterns
- **Code Optimization:** Suggestions for maximum reimbursement within compliance
- **Prior Authorization:** Automated prior auth status checking and submission

3.2 Scheduling & Appointment Management

Core Functionality

- **Intelligent Scheduling:** AI-optimized appointment booking with provider matching
- **Waitlist Management:** Automated patient outreach for cancellation opportunities
- **No-Show Prediction:** Risk assessment and proactive patient engagement
- **Resource Optimization:** Room and provider utilization analytics

Technical Implementation

- **Data Sources:**
 - **PostgreSQL:** Appointment schedules and patient preferences
 - **Firestore:** Real-time schedule updates and availability
 - **BigQuery:** Historical scheduling patterns for optimization
- **AI Integration:**
 - **Waitlist Manager Agent:** Automated patient notification for open slots
 - **No-Show Prediction:** Risk scoring based on patient history and patterns
 - **Schedule Optimization:** AI-driven provider and room assignment

3.3 Referral Management System

Core Functionality

- **Intelligent Intake:** AI-powered referral document processing and triage
- **Urgency Assessment:** Clinical priority scoring for referral routing
- **Provider Matching:** Optimal specialist assignment based on expertise and availability
- **Conversion Tracking:** Referral leakage prevention and follow-up automation

Technical Implementation

- **Document Processing:** Integration with Document AI for referral form digitization
- **Clinical Analysis:** AI assessment of referral urgency and complexity
- **Workflow Orchestration:** Automated routing to appropriate specialists
- **Analytics Pipeline:** Conversion tracking and leakage identification via BigQuery

AI Workflow: Referral Processing Agent

- **Input:** Referral documents uploaded to Cloud Storage
- **Processing:** Document extraction + clinical urgency analysis + provider matching
- **Output:** Structured referral with priority, suggested provider, and recommended actions
- **Human Review:** Referral coordinator approval required before patient contact

3.4 Inventory & Device Management

Core Functionality

- **Device Tracking:** Real-time inventory status for at-home monitoring devices
- **Return Management:** Automated patient reminders and overdue tracking
- **Utilization Analytics:** Device usage patterns and optimization recommendations
- **Maintenance Scheduling:** Predictive maintenance and service coordination

Technical Implementation

- **Data Sources:**
 - **PostgreSQL:** Device inventory and assignment records
 - **Firestore:** Real-time device status and patient assignments
 - **IoT Integration:** Device connectivity for usage monitoring (future capability)
 - **AI Integration:**
 - **Device Monitoring Agent:** Automated return reminders and overdue tracking
 - **Utilization Optimization:** AI-driven inventory management and procurement suggestions
-

Nice to Have Features: Administrative & Revenue Operations

3.5 Value-Based Care & Quality Reporting

Core Functionality

- **Automated Quality Measure Reporting:** Real-time HEDIS, MIPS, and CMS quality measure tracking
- **Value-Based Care Analytics:** Per-patient profitability analysis and risk adjustment optimization
- **Population Health Reporting:** Automated reporting for ACO and value-based contracts
- **Clinical Guideline Compliance:** Continuous monitoring of evidence-based care delivery

Technical Implementation

- **Quality Metrics Engine:** Real-time calculation of quality measures from clinical data
- **Risk Adjustment Platform:** AI-powered HCC coding and risk score optimization
- **Reporting Automation:** Scheduled generation and submission of quality reports

AI Integration

- **Quality Measures AI:** Automated identification of quality improvement opportunities
- **Risk Adjustment Agent:** Intelligent HCC coding suggestions and documentation improvement
- **Population Health Analytics:** AI-driven insights for value-based care performance

3.6 Multi-Practice & Health System Platform

Core Functionality

- **Centralized Analytics:** Consolidated reporting and analytics across multiple practice locations
- **Resource Sharing:** Intelligent staff and equipment allocation across locations
- **Standardized Protocol Distribution:** Centralized care protocol management with local customization
- **Cross-Location Patient Management:** Unified patient experience across practice network

Technical Implementation

- **Multi-Tenant Architecture:** Enhanced tenant isolation with health system hierarchy support
- **Central Data Warehouse:** BigQuery federation across multiple practice databases
- **Resource Optimization Engine:** AI-driven allocation of shared resources and staff

AI Integration

- **Network Optimization AI:** Intelligent resource allocation and protocol standardization
- **Cross-Location Analytics:** Comparative performance analysis and best practice identification

3.7 Advanced Care Coordination Platform

Core Functionality

- **Provider-to-Provider Messaging:** Secure communication platform for care coordination
- **Shared Care Plans:** Collaborative care planning across multiple providers and specialties
- **Transition of Care Automation:** Automated care handoffs for hospital-to-practice transitions
- **Health Information Exchange Integration:** Bidirectional data sharing with regional HIEs

Technical Implementation

- **Care Coordination Database:** PostgreSQL-based care plan and communication tracking
- **HIE Integration APIs:** Standards-based integration with health information exchanges
- **Secure Messaging Platform:** HIPAA-compliant provider communication system

AI Integration

- **Care Coordination Agent:** Intelligent care plan suggestions and provider communication
 - **Transition of Care AI:** Automated care summary generation and handoff optimization
-

4. AI Agent Platform & Orchestration

This category covers the underlying AI infrastructure and agent coordination that powers intelligent automation across the platform.

4.1 AI Agent Orchestration Dashboard

Core Functionality

- **Agent Catalog:** Visual representation of all AI capabilities across the platform
- **Workflow Visualization:** Clear mapping of agent-to-agent communication and handoffs
- **Performance Monitoring:** Real-time metrics for autonomous and assisted AI workflows
- **Human-in-the-Loop Analytics:** Success rates and intervention tracking

Technical Implementation

- **Architecture Integration:** Direct visualization of the AI Agent Platform from Enterprise Architecture

- **Data Sources:**
 - **BigQuery:** AI performance analytics and workflow metrics
 - **Cloud Monitoring:** Real-time agent health and processing times
 - **Firestore:** Live agent queue status and task distribution
- **Capability-Based Routing:** Dynamic agent discovery and task assignment system

Agent Categories

1. **Collaborative AI Workflows:** Multi-agent orchestration with visual handoff mapping
2. **Autonomous Agents:** Background processing with live queue visualization
3. **AI-Assisted Workflows:** Human-in-the-loop features with success rate tracking

4.2 Voice Agent Platform

Core Functionality

- **Persona-Based Architecture:** Specialized AI personalities for different interaction types
- **Contextual Conversations:** Long-term memory and personal detail retention
- **Multi-Channel Integration:** Phone, chat, and portal message coordination
- **Empathetic Interaction Design:** Trained for healthcare-appropriate communication

Technical Implementation

- **AI Agent Platform Integration:** Utilizes the voice-specific agents from the orchestration system
- **Context Management:**
 - **Pinecone Vector Database:** Conversation embeddings and personal context storage
 - **PostgreSQL:** Structured patient communication preferences and history
- **Real-time Processing:**
 - **Speech Services:** Google Cloud Speech-to-Text and Text-to-Speech APIs
 - **Conversation AI:** Custom LLM models fine-tuned for healthcare communication

Agent Personas

- **Front Office Coordinator:** Appointment scheduling and general inquiries
- **Prior Authorization Specialist:** Insurance verification and authorization management
- **Patient Engagement Coordinator:** Proactive outreach and follow-up communications
- **Clinical Triage Assistant:** Symptom assessment and care guidance

4.3 Document Processing Pipeline

Core Functionality

- **Multi-Format Support:** Processing of insurance cards, forms, lab reports, and referrals
- **Intelligent Extraction:** Context-aware data extraction with medical terminology understanding
- **Quality Validation:** AI-powered accuracy checking and confidence scoring
- **Workflow Integration:** Seamless handoff to appropriate human reviewers

Technical Implementation

- **Document AI Integration:** Google Cloud Document AI with healthcare-specific models
 - **Processing Pipeline:**
 - **Cloud Storage:** Secure PHI-compliant document storage
 - **Document Processing Agent:** AI extraction and analysis
 - **Quality Assurance:** Confidence scoring and human review triggering
 - **Data Integration:** Structured output to PostgreSQL and downstream systems
-

Nice to Have Features: AI Agent Platform & Orchestration

4.4 Advanced Predictive Analytics Platform

Core Functionality

- **Health Outcome Prediction:** AI models to predict patient health trajectories and intervention needs
- **Readmission Risk Scoring:** Advanced risk assessment for post-discharge patients
- **Medication Adherence Prediction:** Behavioral analysis to identify adherence risks
- **Population Health Intelligence:** Cohort analysis and outbreak detection capabilities

Technical Implementation

- **Predictive Model Pipeline:** MLOps infrastructure for continuous model training and deployment
- **Patient Risk Database:** Real-time risk scoring and intervention tracking
- **Population Analytics Engine:** Large-scale data analysis for population health insights

AI Integration

- **Predictive Health Agent:** Continuous monitoring and risk assessment across patient populations
- **Intervention Recommendation Engine:** AI-driven suggestions for preventive care and interventions

- **Population Health AI:** Advanced analytics for public health reporting and outbreak detection

4.5 Adaptive Workflow Intelligence

Core Functionality

- **Dynamic Agent Capability Learning:** AI agents that learn new capabilities based on practice patterns
- **Intelligent Escalation Paths:** Adaptive routing based on staff expertise and availability
- **Workflow Optimization Engine:** Continuous improvement of clinical and administrative processes
- **Practice-Specific AI Customization:** Machine learning models that adapt to individual practice workflows

Technical Implementation

- **Adaptive Learning Platform:** Continuous model training based on workflow feedback and outcomes
- **Capability Registry:** Dynamic tracking of agent capabilities and performance metrics
- **Workflow Analytics:** Real-time analysis of process efficiency and optimization opportunities

AI Integration

- **Adaptive Orchestration Agent:** Meta-agent that optimizes agent assignment and workflow routing
- **Learning Algorithm Engine:** Continuous improvement of AI performance based on human feedback
- **Custom Model Training:** Practice-specific model fine-tuning for optimal performance

4.6 IoT & Remote Monitoring Integration

Core Functionality

- **Wearable Device Integration:** Real-time data ingestion from patient wearables and monitors
- **Smart Home Health Integration:** Connection with home monitoring devices and sensors
- **Automated Health Alerts:** Intelligent threshold monitoring and clinical team notifications
- **Device Management Platform:** Comprehensive IoT device lifecycle management

Technical Implementation

- **IoT Data Pipeline:** Real-time streaming data processing via Cloud Pub/Sub and Dataflow
- **Device Registry:** Secure device authentication and data encryption

- **Alert Processing Engine:** Intelligent filtering and prioritization of device-generated alerts

AI Integration

- **Remote Monitoring Agent:** Continuous analysis of patient vitals and health trends
 - **Alert Intelligence Engine:** Smart filtering and prioritization of health alerts to reduce false positives
 - **Predictive Health Monitoring:** Early warning systems for health deterioration or improvement
-

5. Management & Operations Intelligence

This category encompasses executive dashboards, practice analytics, and operational intelligence for strategic decision-making.

5.1 Practice Command Center (Owner Portal)

Core Functionality

- **Executive Dashboard:** 360-degree view of practice performance across financial and operational metrics
- **Predictive Analytics:** AI-powered forecasting for revenue, patient volume, and resource needs
- **Strategic Insights:** Actionable recommendations for practice growth and optimization
- **Performance Benchmarking:** Comparative analysis against industry standards

Technical Implementation

- **Data Sources:**
 - **BigQuery:** Comprehensive analytics warehouse with historical trends
 - **PostgreSQL:** Real-time operational data aggregation
 - **External APIs:** Industry benchmarking and market data integration
- **Analytics Pipeline:**
 - **Revenue Forecasting Agent:** AI-powered financial projections
 - **Operational Analytics:** Performance trend identification and anomaly detection
 - **Strategic Recommendations:** AI-generated insights for practice optimization

Key Analytics Components

- **Financial Intelligence:** Revenue forecasting, payer performance, cost optimization
- **Operational Excellence:** Wait times, throughput, staff utilization
- **Growth Analytics:** Referral sources, patient acquisition, market opportunities

- **Risk Management:** Compliance monitoring, quality metrics, financial exposure

5.2 Practice Health Dashboard

Core Functionality

- **Service Status Monitoring:** Real-time health checking of all platform components
- **Performance Analytics:** Response time tracking and system performance metrics
- **Alerting System:** Proactive notification of service degradations or outages
- **Dependency Mapping:** Visualization of service interconnections and failure impact

Technical Implementation

- **Monitoring Integration:** Google Cloud Monitoring with custom health check agents
- **Data Sources:**
 - **Cloud Monitoring:** Infrastructure and application performance metrics
 - **Cloud Logging:** Error tracking and system event analysis
 - **External API Monitoring:** Third-party service availability and performance
- **Alerting Pipeline:**
 - **Health Check Agent:** Automated service monitoring and status reporting
 - **Incident Management:** Automated escalation and notification workflows

5.3 AI Performance Analytics

Core Functionality

- **Agent Performance Tracking:** Success rates, processing times, and accuracy metrics for all AI agents
- **Human-in-the-Loop Analysis:** Intervention rates and feedback incorporation
- **Model Improvement:** Continuous learning and model refinement recommendations
- **Cost Optimization:** AI resource usage and efficiency optimization

Technical Implementation

- **Analytics Infrastructure:**
 - **BigQuery:** Comprehensive AI performance data warehouse
 - **Cloud Monitoring:** Real-time AI agent performance metrics
 - **MLOps Pipeline:** Model performance tracking and improvement workflows
- **Performance Insights:**

- **Success Rate Analysis:** Accuracy tracking across all AI workflows
- **Cost Efficiency:** Token usage optimization and resource allocation
- **Human Feedback Integration:** Continuous improvement based on user corrections

5.4 Practice Configuration Management

Core Functionality

- **AI Agent Configuration:** Granular control over AI behavior and automation levels
- **Workflow Customization:** Practice-specific workflow configuration and rule setting
- **Integration Management:** External API connections and third-party service configuration
- **Compliance Settings:** HIPAA and regulatory compliance parameter management

Technical Implementation

- **Configuration Storage:**
 - **PostgreSQL:** Practice settings and configuration parameters
 - **Secret Manager:** Secure API key and credential management
 - **Firestore:** Real-time configuration updates and propagation
 - **Configuration Management:**
 - **Three-Tier AI Control:** Disabled, Human-in-the-Loop, Fully Autonomous settings
 - **Workflow Rules Engine:** Customizable business logic and approval workflows
 - **Integration Gateway:** Standardized external API management and monitoring
-

Nice to Have Features: Management & Operations Intelligence

5.5 Advanced Population Health Analytics

Core Functionality

- **Cohort Analysis Dashboard:** Advanced analytics for diabetes, hypertension, and other chronic disease management
- **Social Determinants Integration:** Incorporation of social and economic factors in health outcome analysis
- **Community Health Reporting:** Public health surveillance and reporting capabilities
- **Health Equity Analytics:** Analysis of care disparities and intervention recommendations

Technical Implementation

- **Population Health Database:** Large-scale patient cohort analysis via BigQuery
- **Social Determinants API:** Integration with social and economic data sources
- **Public Health Reporting:** Automated generation of community health reports

AI Integration

- **Population Health Agent:** Advanced analytics for identifying at-risk patient populations
- **Health Equity AI:** Analysis of care disparities and recommendations for equitable care delivery
- **Community Health Intelligence:** Predictive analytics for population health trends and interventions

5.6 Multi-Practice Network Intelligence

Core Functionality

- **Network Performance Analytics:** Consolidated analytics across multiple practice locations and health systems
- **Best Practice Identification:** AI-driven analysis of high-performing practices and workflow optimization
- **Resource Optimization:** Intelligent allocation of staff, equipment, and resources across network
- **Standardization Recommendations:** Evidence-based suggestions for protocol and workflow standardization

Technical Implementation

- **Federated Analytics:** BigQuery federation across multiple practice databases
- **Benchmarking Platform:** Comparative analysis engine for network performance
- **Resource Optimization Engine:** AI-driven resource allocation and planning tools

AI Integration

- **Network Intelligence Agent:** Advanced analytics for multi-practice performance optimization
- **Best Practice AI:** Identification and dissemination of successful practice patterns
- **Resource Optimization Engine:** Intelligent allocation and planning across practice network

5.7 Advanced Benchmarking & Market Intelligence

Core Functionality

- **Industry Benchmarking:** Comprehensive comparison against similar practices and industry standards

- **Market Opportunity Analysis:** AI-powered identification of growth opportunities and market trends
- **Competitive Intelligence:** Analysis of local healthcare market and positioning recommendations
- **Strategic Planning Support:** Data-driven insights for practice expansion and service line development

Technical Implementation

- **External Data Integration:** APIs for industry benchmarking data and market intelligence
- **Competitive Analysis Engine:** AI-powered analysis of local healthcare market dynamics
- **Strategic Planning Dashboard:** Executive-level insights and recommendations

AI Integration

- **Market Intelligence Agent:** Continuous monitoring of healthcare market trends and opportunities
- **Competitive Analysis AI:** Advanced analysis of practice positioning and differentiation opportunities
- **Strategic Planning Engine:** AI-driven recommendations for practice growth and development

5.8 Predictive Operations Intelligence

Core Functionality

- **Predictive Staffing Models:** AI-powered forecasting of staffing needs based on patient volume and seasonal patterns
- **Supply Chain Optimization:** Intelligent inventory management and procurement recommendations
- **Equipment Utilization Analytics:** Optimization of medical equipment usage and maintenance scheduling
- **Financial Forecasting:** Advanced revenue and expense prediction with scenario planning

Technical Implementation

- **Predictive Analytics Pipeline:** Advanced forecasting models for operational planning
- **Supply Chain Integration:** APIs for vendor management and inventory optimization
- **Equipment Monitoring:** IoT integration for equipment utilization and maintenance tracking

AI Integration

- **Operations Forecasting Agent:** Predictive analytics for staffing, inventory, and resource planning
 - **Supply Chain AI:** Intelligent procurement and inventory management recommendations
 - **Financial Planning Engine:** Advanced financial modeling and scenario analysis capabilities
-

Cross-Cutting Technical Considerations

Security & Compliance

- **PHI Protection:** All patient data encrypted at rest and in transit using CMEK
- **Audit Logging:** Comprehensive audit trails for all patient data access via Cloud Logging
- **Access Controls:** Role-based access with principle of least privilege
- **HIPAA Compliance:** Full compliance with healthcare data protection requirements

Performance & Scalability

- **Multi-Tenant Architecture:** Isolated tenant data with shared infrastructure efficiency
- **Caching Strategy:** Redis-based caching for frequently accessed data
- **API Rate Limiting:** Intelligent rate limiting with burst capability
- **Auto-Scaling:** Cloud Run and GKE auto-scaling based on demand

Data Architecture

- **Multi-Model Database:** PostgreSQL for structured data, Firestore for real-time, BigQuery for analytics
- **Event-Driven Updates:** Pub/Sub messaging for asynchronous workflow coordination
- **Real-Time Synchronization:** Firestore listeners for live UI updates
- **Data Consistency:** ACID transactions where required, eventual consistency for real-time features

AI Platform Integration

- **Capability-Based Routing:** Dynamic agent discovery and intelligent task distribution
- **Human-in-the-Loop Workflows:** Consistent approval patterns across all AI features
- **Continuous Learning:** Feedback incorporation and model improvement cycles
- **Empathetic Design:** All AI interactions optimized for healthcare communication standards

This comprehensive PRD provides the technical foundation for implementing the Sarthi platform according to the Enterprise Architecture Document v1.5, ensuring consistency between architectural vision and development execution.

This category covers all clinical staff workflows enhanced by AI assistance while maintaining human oversight and clinical judgment.

2.1 MA (Medical Assistant) Workflows

2.1.1 MA Dashboard & Patient Queuing

Core Functionality

- **Dynamic Patient Queues:** Real-time patient status tracking across clinical workflow stages
- **Live Wait Tracking:** Continuous calculation of patient wait times with SLA monitoring
- **Room Assignment:** Interactive room management with availability optimization
- **Status Orchestration:** Automated status updates integrated with workflow engine

Technical Implementation

```
yaml
```

```
# Real-time Data Architecture
```

```
Firestore Real-time Listeners → Patient Queue State Management →
```

```
Status Updates via API Gateway → PostgreSQL Persistence →
```

```
Cross-component Synchronization via Pub/Sub
```

Data Sources

- **Firestore:** Real-time patient queue with live status updates
- **PostgreSQL:** Patient scheduling and room assignment records
- **Redis Cache:** Frequently accessed queue data for performance
- **Cloud Monitoring:** Wait time analytics and SLA tracking

2.1.2 MA Patient Intake

Core Functionality

- **Vitals Collection:** Integration with medical device APIs and manual entry validation
- **Medication Reconciliation:** AI-powered medication matching and conflict detection
- **Ambient AI Scribe:** Live conversation transcription and clinical summary generation
- **Doctor Handoff:** Structured summary creation for clinical encounter preparation

Technical Implementation

- **Data Sources:**
 - **PostgreSQL:** Patient medical history and medication records
 - **Firestore:** Real-time intake progress and clinical notes
 - **Speech Recognition:** Browser API integration with cloud backup processing

- **AI Integration:**
 - **Clinical Summary Agent:** Processes conversation transcripts via the AI Agent Platform
 - **Medication Reconciliation:** AI-powered drug interaction and allergy checking
 - **Workflow Orchestration:** Automated handoff to doctor queue via Pub/Sub messaging

AI Workflow: Ambient Scribe Summary

- **Input:** Live conversation transcript from browser Speech Recognition API
- **Processing:** Clinical Summary Agent analyzes conversation for medical relevance
- **Output:** Structured handoff summary stored in PostgreSQL and Firestore
- **Human Approval:** Required before patient advancement to doctor queue

2.2 Doctor Clinical Workflows

2.2.1 Doctor Dashboard

Core Functionality

- **Intelligent Patient Queuing:** AI-prioritized patient lists based on acuity and wait times
- **Lab Result Reviews:** Integrated lab analysis with AI-generated clinical interpretations
- **Clinical Decision Support:** Evidence-based recommendations and alert systems
- **Workflow Optimization:** Smart scheduling and task prioritization

Technical Implementation

- **Data Sources:**
 - **PostgreSQL:** Patient schedules, lab results, and clinical data
 - **BigQuery:** Historical clinical patterns for AI insights
 - **Firestore:** Real-time patient status and queue updates
- **AI Integration:**
 - **Lab Analysis Agent:** Automated lab result interpretation and flagging
 - **Clinical Decision Support:** Evidence-based recommendation engine
 - **Priority Scoring:** AI-driven patient acuity assessment

2.2.2 Doctor Clinical Encounter (Patient Chart)

Core Functionality

- **Pre-Encounter Intelligence:** AI-generated patient summaries and risk assessments

- **Live Clinical Documentation:** AI Scribe for real-time SOAP note generation
- **Intelligent Context Display:** Real-time relevant information presentation based on conversation topics
- **Predictive Order Generation:** Automated medication and lab order creation from conversation analysis
- **Automated Coding:** AI-powered ICD-10 and CPT code suggestions
- **Order Management:** Intelligent order sets with prior authorization checking
- **Billing Integration:** Seamless claim generation and review workflow

Advanced Features: Intelligent Clinical Assistant

Real-Time Context-Aware Information Display

- **Conversation Topic Detection:** AI analysis of live conversation to identify clinical topics being discussed
- **Intelligent Split-Screen Interface:** Automatic display of relevant clinical data as topics arise
- **Trend Visualization:** Real-time charts and graphs showing lab trends, vital sign patterns, and medication efficacy
- **Historical Context:** Automatic retrieval of previous visit notes, lab results, and imaging when referenced

Example Scenarios:

- Doctor mentions "blood pressure" → Split screen shows BP trends, current medications, target goals
- Discussion of "diabetes" → A1C history, glucose logs, medication adherence data appears
- "Lab results" mentioned → Most recent labs with comparison to previous values and normal ranges
- "Chest pain" discussed → EKG history, cardiac risk factors, previous cardiac workups displayed

Predictive Order Generation

- **Real-Time Order Prediction:** AI analyzes conversation to suggest and pre-populate orders
- **Contextual Order Sets:** Smart order recommendations based on patient condition and conversation content
- **Medication Reconciliation:** Automatic drug interaction checking and dosage optimization
- **Follow-Up Automation:** Intelligent scheduling of follow-up appointments and lab work

Example Workflows:

- Doctor discusses elevated A1C → System pre-populates diabetes lab panel for next visit

- Mentions "blood pressure not controlled" → Suggests ACE inhibitor adjustment and follow-up BP check
- Patient reports knee pain → Pre-loads X-ray order and physical therapy referral
- Discussion of cholesterol → Automatically suggests lipid panel timing and statin review

Technical Implementation

yaml

Real-Time Clinical Intelligence Workflow

Live Conversation → Speech-to-Text → NLP Topic Extraction →

Clinical Context Retrieval → Relevant Data Display →

Predictive Order Generation → Real-Time UI Updates

AI Integration: Intelligent Clinical Assistant Agent

1. Conversation Analysis Engine:

- **Input:** Real-time conversation transcript from AI Scribe
- **Processing:** Advanced NLP to identify clinical topics, conditions, medications, and symptoms
- **Output:** Structured topics with relevance scores and context requirements

2. Context Retrieval Agent:

- **Input:** Identified clinical topics and patient ID
- **Processing:** Intelligent querying of patient medical history, lab results, imaging, and previous notes
- **Output:** Prioritized, relevant clinical information formatted for display

3. Predictive Order Agent:

- **Input:** Conversation context, clinical topics, and patient medical history
- **Processing:** Evidence-based order generation using clinical guidelines and best practices
- **Output:** Pre-populated orders with clinical justification and prior authorization status

Split-Screen Interface Design

yaml

UI Layout

Main Conversation Area (60%) | Intelligent Context Panel (40%)

- | | |
|-------------------------|--------------------------------|
| - Live transcription | - Dynamic clinical information |
| - SOAP note generation | - Lab trends and results |
| - Patient interaction | - Medication history |
| - Order review area | - Relevant guidelines |
| - Billing codes display | - Risk alerts and warnings |

Data Sources & Real-Time Processing

- **PostgreSQL:** Patient medical history, lab results, medication records
- **Firestore:** Real-time conversation updates and context synchronization
- **Vector Database:** Clinical knowledge base for relevant information retrieval
- **BigQuery:** Historical patterns for predictive order generation
- **External APIs:** Real-time drug interaction checking and clinical guideline access

Smart Information Prioritization

- **Relevance Scoring:** AI determines most relevant information based on conversation context
- **Temporal Intelligence:** Recent results prioritized over older data, with trend analysis
- **Clinical Significance:** Abnormal values, critical alerts, and actionable items highlighted
- **Personalization:** Learns individual doctor preferences for information display and detail level

Predictive Order Features

- **Evidence-Based Suggestions:** Orders based on clinical guidelines and best practices
- **Patient-Specific Optimization:** Dosing, timing, and follow-up customized to patient history
- **Insurance Integration:** Real-time prior authorization checking and alternative suggestions
- **Workflow Integration:** Orders automatically formatted for EHR integration and lab connectivity

Voice Command Integration

- **Hands-Free Confirmation:** "Approve the lipid panel order", "Add CBC to the lab work"
- **Quick Modifications:** "Change metformin to extended release", "Schedule follow-up in 3 months"
- **Information Requests:** "Show me the last chest X-ray", "Pull up blood pressure trends"
- **Order Customization:** "Make that lab stat", "Add patient instructions for fasting"

Clinical Decision Support Integration

- **Real-Time Alerts:** Drug interactions, allergies, and contraindications during order generation
- **Guideline Compliance:** Automatic checking against clinical best practices and quality measures
- **Risk Assessment:** Patient-specific risk scoring for procedures and medications
- **Alternative Suggestions:** Cost-effective alternatives and generic medication options

Performance & User Experience

- **Sub-Second Response:** Information display within 500ms of topic identification
- **Seamless Integration:** Context panel updates without disrupting main conversation flow
- **Smart Caching:** Frequently accessed patient data cached for instant retrieval
- **Graceful Degradation:** Core functionality maintained even if AI services are temporarily unavailable

AI Workflows Integration

1. Clinical Note Generation Agent:

- **Enhanced Input:** Patient conversation transcript with real-time context analysis
- **Tools:** Enhanced prior authorization checker, appointment scheduler, clinical guideline validator
- **Enhanced Output:** Structured SOAP note with context-aware billing codes, validated orders, and clinical decision support

2. Billing Claims Agent:

- **Enhanced Input:** Clinical note with AI-validated codes and comprehensive order documentation
- **Processing:** Advanced payer rule validation with real-time prior authorization status
- **Enhanced Output:** Claims with higher approval probability and reduced denial risk

Data Architecture

- **PostgreSQL:** Enhanced patient medical records with indexed clinical topics for fast retrieval
- **Cloud Storage:** Encrypted audio recordings and clinical documents with AI-generated metadata
- **Firestore:** Real-time collaboration, context updates, and order synchronization
- **Vector Database:** Enhanced clinical knowledge base with conversation-topic mapping
- **Redis Cache:** Frequently accessed patient data and clinical guidelines for sub-second retrieval

Security & Privacy Considerations

- **Real-Time PHI Protection:** All displayed information encrypted and access-logged
- **Context-Aware Permissions:** Information display respects user role and patient consent
- **Audit Trail:** Complete logging of all information accessed and orders generated

- **Fail-Safe Design:** Manual override capabilities for all AI-generated suggestions

This intelligent clinical assistant transforms the doctor-patient encounter into a highly efficient, context-aware interaction where relevant information appears automatically and orders are intelligently pre-populated, dramatically reducing cognitive load and administrative burden while improving clinical decision-making.

2.3 Technician & Lab Workflows

2.3.1 Technician Dashboard

Core Functionality

- **Lab Result Processing Queue:** AI-prioritized lab results requiring technician review
- **Quality Assurance:** AI-assisted result validation and error detection
- **Workflow Integration:** Seamless handoff to physician review queue

Technical Implementation

- **Data Sources:**
 - **PostgreSQL:** Lab result database with workflow status tracking
 - **Cloud Storage:** Lab documents and images with PHI encryption
 - **Firestore:** Real-time workflow status and queue management

2.3.2 AI-Assisted Lab Result Entry

Core Functionality

- **Automated OCR Processing:** Document AI integration for lab report digitization
- **Clinical Validation:** AI-powered normal/abnormal value detection
- **Quality Control:** Human-in-the-loop verification workflow
- **Result Distribution:** Automated routing to appropriate clinical staff

AI Workflow: Lab Processing Agent

- **Input:** Lab document images from Cloud Storage
- **Processing:** Document AI OCR + clinical interpretation models
- **Output:** Structured lab data with normal/abnormal flagging
- **Validation:** Required human technician approval before physician review

Technical Implementation

- **Document Processing:** Google Document AI for OCR with healthcare-specific models
 - **Clinical Rules Engine:** AI-powered normal range validation and flagging
 - **Workflow Orchestration:** Pub/Sub messaging for result distribution
 - **Audit Trail:** Complete processing history logged to Cloud Logging
-

3. Administrative & Revenue Operations

This category encompasses billing, scheduling, referral management, and other administrative workflows that drive practice operations.

3.1 Billing Portal & Revenue Cycle

Core Functionality

- **Intelligent Claim Review:** AI-powered claim scrubbing with denial risk assessment
- **Human-in-the-Loop Approval:** Biller review workflow for flagged claims
- **Automated Submission:** Direct integration with payer systems for approved claims
- **Revenue Analytics:** Real-time billing performance and denial tracking

Technical Implementation

- **Data Sources:**
 - **PostgreSQL:** Claims database with processing status tracking
 - **BigQuery:** Revenue analytics and denial pattern analysis
 - **Cloud Storage:** Claim documents and supporting documentation
- **Integration APIs:** Direct payer connectivity for claim submission and status tracking

AI Integration: Claims Processing Pipeline

1. Claims Scrubbing Agent:

- **Input:** Clinical notes and billing codes from doctor encounters
- **Processing:** Payer rule validation and medical necessity analysis
- **Output:** Approved claims or flagged issues with specific recommendations

2. Revenue Optimization:

- **Denial Prediction:** AI models trained on historical denial patterns
- **Code Optimization:** Suggestions for maximum reimbursement within compliance
- **Prior Authorization:** Automated prior auth status checking and submission

3.2 Scheduling & Appointment Management

Core Functionality

- **Intelligent Scheduling:** AI-optimized appointment booking with provider matching
- **Waitlist Management:** Automated patient outreach for cancellation opportunities
- **No-Show Prediction:** Risk assessment and proactive patient engagement
- **Resource Optimization:** Room and provider utilization analytics

Technical Implementation

- **Data Sources:**
 - **PostgreSQL:** Appointment schedules and patient preferences
 - **Firestore:** Real-time schedule updates and availability
 - **BigQuery:** Historical scheduling patterns for optimization
- **AI Integration:**
 - **Waitlist Manager Agent:** Automated patient notification for open slots
 - **No-Show Prediction:** Risk scoring based on patient history and patterns
 - **Schedule Optimization:** AI-driven provider and room assignment

3.3 Referral Management System

Core Functionality

- **Intelligent Intake:** AI-powered referral document processing and triage
- **Urgency Assessment:** Clinical priority scoring for referral routing
- **Provider Matching:** Optimal specialist assignment based on expertise and availability
- **Conversion Tracking:** Referral leakage prevention and follow-up automation

Technical Implementation

- **Document Processing:** Integration with Document AI for referral form digitization
- **Clinical Analysis:** AI assessment of referral urgency and complexity
- **Workflow Orchestration:** Automated routing to appropriate specialists
- **Analytics Pipeline:** Conversion tracking and leakage identification via BigQuery

AI Workflow: Referral Processing Agent

- **Input:** Referral documents uploaded to Cloud Storage

- **Processing:** Document extraction + clinical urgency analysis + provider matching
- **Output:** Structured referral with priority, suggested provider, and recommended actions
- **Human Review:** Referral coordinator approval required before patient contact

3.4 Inventory & Device Management

Core Functionality

- **Device Tracking:** Real-time inventory status for at-home monitoring devices
- **Return Management:** Automated patient reminders and overdue tracking
- **Utilization Analytics:** Device usage patterns and optimization recommendations
- **Maintenance Scheduling:** Predictive maintenance and service coordination

Technical Implementation

- **Data Sources:**
 - **PostgreSQL:** Device inventory and assignment records
 - **Firestore:** Real-time device status and patient assignments
 - **IoT Integration:** Device connectivity for usage monitoring (future capability)
 - **AI Integration:**
 - **Device Monitoring Agent:** Automated return reminders and overdue tracking
 - **Utilization Optimization:** AI-driven inventory management and procurement suggestions
-

4. AI Agent Platform & Orchestration

This category covers the underlying AI infrastructure and agent coordination that powers intelligent automation across the platform.

4.1 AI Agent Orchestration Dashboard

Core Functionality

- **Agent Catalog:** Visual representation of all AI capabilities across the platform
- **Workflow Visualization:** Clear mapping of agent-to-agent communication and handoffs
- **Performance Monitoring:** Real-time metrics for autonomous and assisted AI workflows
- **Human-in-the-Loop Analytics:** Success rates and intervention tracking

Technical Implementation

- **Architecture Integration:** Direct visualization of the AI Agent Platform from Enterprise Architecture v1.5
- **Data Sources:**
 - **BigQuery:** AI performance analytics and workflow metrics
 - **Cloud Monitoring:** Real-time agent health and processing times
 - **Firestore:** Live agent queue status and task distribution
- **Capability-Based Routing:** Dynamic agent discovery and task assignment system

Agent Categories

1. **Collaborative AI Workflows:** Multi-agent orchestration with visual handoff mapping
2. **Autonomous Agents:** Background processing with live queue visualization
3. **AI-Assisted Workflows:** Human-in-the-loop features with success rate tracking

4.2 Voice Agent Platform

Core Functionality

- **Persona-Based Architecture:** Specialized AI personalities for different interaction types
- **Contextual Conversations:** Long-term memory and personal detail retention
- **Multi-Channel Integration:** Phone, chat, and portal message coordination
- **Empathetic Interaction Design:** Trained for healthcare-appropriate communication

Technical Implementation

- **AI Agent Platform Integration:** Utilizes the voice-specific agents from the orchestration system
- **Context Management:**
 - **Pinecone Vector Database:** Conversation embeddings and personal context storage
 - **PostgreSQL:** Structured patient communication preferences and history
- **Real-time Processing:**
 - **Speech Services:** Google Cloud Speech-to-Text and Text-to-Speech APIs
 - **Conversation AI:** Custom LLM models fine-tuned for healthcare communication

Agent Personas

- **Front Office Coordinator:** Appointment scheduling and general inquiries
- **Prior Authorization Specialist:** Insurance verification and authorization management
- **Patient Engagement Coordinator:** Proactive outreach and follow-up communications

- **Clinical Triage Assistant:** Symptom assessment and care guidance

4.3 Document Processing Pipeline

Core Functionality

- **Multi-Format Support:** Processing of insurance cards, forms, lab reports, and referrals
- **Intelligent Extraction:** Context-aware data extraction with medical terminology understanding
- **Quality Validation:** AI-powered accuracy checking and confidence scoring
- **Workflow Integration:** Seamless handoff to appropriate human reviewers

Technical Implementation

- **Document AI Integration:** Google Cloud Document AI with healthcare-specific models
 - **Processing Pipeline:**
 - **Cloud Storage:** Secure PHI-compliant document storage
 - **Document Processing Agent:** AI extraction and analysis
 - **Quality Assurance:** Confidence scoring and human review triggering
 - **Data Integration:** Structured output to PostgreSQL and downstream systems
-

5. Management & Operations Intelligence

This category encompasses executive dashboards, practice analytics, and operational intelligence for strategic decision-making.

5.1 Practice Command Center (Owner Portal)

Core Functionality

- **Executive Dashboard:** 360-degree view of practice performance across financial and operational metrics
- **Predictive Analytics:** AI-powered forecasting for revenue, patient volume, and resource needs
- **Strategic Insights:** Actionable recommendations for practice growth and optimization
- **Performance Benchmarking:** Comparative analysis against industry standards

Technical Implementation

- **Data Sources:**
 - **BigQuery:** Comprehensive analytics warehouse with historical trends
 - **PostgreSQL:** Real-time operational data aggregation

- **External APIs:** Industry benchmarking and market data integration
- **Analytics Pipeline:**
 - **Revenue Forecasting Agent:** AI-powered financial projections
 - **Operational Analytics:** Performance trend identification and anomaly detection
 - **Strategic Recommendations:** AI-generated insights for practice optimization

Key Analytics Components

- **Financial Intelligence:** Revenue forecasting, payer performance, cost optimization
- **Operational Excellence:** Wait times, throughput, staff utilization
- **Growth Analytics:** Referral sources, patient acquisition, market opportunities
- **Risk Management:** Compliance monitoring, quality metrics, financial exposure

5.2 Practice Health Dashboard

Core Functionality

- **Service Status Monitoring:** Real-time health checking of all platform components
- **Performance Analytics:** Response time tracking and system performance metrics
- **Alerting System:** Proactive notification of service degradations or outages
- **Dependency Mapping:** Visualization of service interconnections and failure impact

Technical Implementation

- **Monitoring Integration:** Google Cloud Monitoring with custom health check agents
- **Data Sources:**
 - **Cloud Monitoring:** Infrastructure and application performance metrics
 - **Cloud Logging:** Error tracking and system event analysis
 - **External API Monitoring:** Third-party service availability and performance
- **Alerting Pipeline:**
 - **Health Check Agent:** Automated service monitoring and status reporting
 - **Incident Management:** Automated escalation and notification workflows

5.3 AI Performance Analytics

Core Functionality

- **Agent Performance Tracking:** Success rates, processing times, and accuracy metrics for all AI agents

- **Human-in-the-Loop Analysis:** Intervention rates and feedback incorporation
- **Model Improvement:** Continuous learning and model refinement recommendations
- **Cost Optimization:** AI resource usage and efficiency optimization

Technical Implementation

- **Analytics Infrastructure:**
 - **BigQuery:** Comprehensive AI performance data warehouse
 - **Cloud Monitoring:** Real-time AI agent performance metrics
 - **MLOps Pipeline:** Model performance tracking and improvement workflows
- **Performance Insights:**
 - **Success Rate Analysis:** Accuracy tracking across all AI workflows
 - **Cost Efficiency:** Token usage optimization and resource allocation
 - **Human Feedback Integration:** Continuous improvement based on user corrections

5.4 Practice Configuration Management

Core Functionality

- **AI Agent Configuration:** Granular control over AI behavior and automation levels
- **Workflow Customization:** Practice-specific workflow configuration and rule setting
- **Integration Management:** External API connections and third-party service configuration
- **Compliance Settings:** HIPAA and regulatory compliance parameter management

Technical Implementation

- **Configuration Storage:**
 - **PostgreSQL:** Practice settings and configuration parameters
 - **Secret Manager:** Secure API key and credential management
 - **Firestore:** Real-time configuration updates and propagation
- **Configuration Management:**
 - **Three-Tier AI Control:** Disabled, Human-in-the-Loop, Fully Autonomous settings
 - **Workflow Rules Engine:** Customizable business logic and approval workflows
 - **Integration Gateway:** Standardized external API management and monitoring

Cross-Cutting Technical Considerations

Security & Compliance

- **PHI Protection:** All patient data encrypted at rest and in transit using CMEK
- **Audit Logging:** Comprehensive audit trails for all patient data access via Cloud Logging
- **Access Controls:** Role-based access with principle of least privilege
- **HIPAA Compliance:** Full compliance with healthcare data protection requirements

Performance & Scalability

- **Multi-Tenant Architecture:** Isolated tenant data with shared infrastructure efficiency
- **Caching Strategy:** Redis-based caching for frequently accessed data
- **API Rate Limiting:** Intelligent rate limiting with burst capability
- **Auto-Scaling:** Cloud Run and GKE auto-scaling based on demand

Data Architecture

- **Multi-Model Database:** PostgreSQL for structured data, Firestore for real-time, BigQuery for analytics
- **Event-Driven Updates:** Pub/Sub messaging for asynchronous workflow coordination
- **Real-Time Synchronization:** Firestore listeners for live UI updates
- **Data Consistency:** ACID transactions where required, eventual consistency for real-time features

AI Platform Integration

- **Capability-Based Routing:** Dynamic agent discovery and intelligent task distribution
- **Human-in-the-Loop Workflows:** Consistent approval patterns across all AI features
- **Continuous Learning:** Feedback incorporation and model improvement cycles
- **Empathetic Design:** All AI interactions optimized for healthcare communication standards

This comprehensive PRD provides the technical foundation for implementing the Sarthi platform according to the Enterprise Architecture Document v1.5, ensuring consistency between architectural vision and development execution.
